PROFESSIONAL SUMMARY

Full Stack and RPA Developer focused on AI Engineering at KLB Group / Samsung SDS Latin America. I build fully business-tailored AI agents — using LLMs, RAG over knowledge bases and models managed on Google Cloud and AWS Bedrock —, production RPA automations and full stack applications with Java Spring Boot and Flutter. I work end to end: gathering requirements with business teams, development, testing, technical documentation and production support. Currently pursuing a postgraduate degree in Artificial Intelligence at FIAP, aiming to grow as an AI Engineer in product and innovation teams.

HIGHLIGHTS

- Automations that cut process time by up to 99% — from 2 weeks to 7 minutes.
- Generative AI agents in production, integrating LLMs, RAG, CRM data, APIs and automation workflows.
- 1,000+ tickets resolved per month, with a 20% reduction in average resolution time and a 30% efficiency gain.

TECHNICAL SKILLS

Artificial Intelligence: LLMs, Generative AI, RAG, AI Agents, Prompt Engineering, NLP, Fine-tuning, Machine Learning (pandas, NumPy, scikit-learn, matplotlib)
Cloud & AI Platforms: Google Cloud, AWS Bedrock, Azure, Azure Active Directory
Back-end: Java, Spring Boot, Python, Node.js, REST APIs, system integrations
Front-end & Mobile: Flutter, JavaScript, HTML5, CSS3
RPA & Automation: Brity RPA, Python, JScript, SAP GUI, e-mail, spreadsheet and ERP automation
Data & BI: SQL, MySQL, Power BI, monitoring dashboards and KPIs
DevOps & Tools: Docker, Linux, Git, GitHub, Azure DevOps (Boards and Repos), Postman, VS Code, virtual machines
Practices: Scrum, Kanban, Jira, User Stories, code review, technical documentation, production support

EXPERIENCE

KLB Group / Samsung SDS Latin America Apr 2026 – Present

Junior RPA & Full Stack Developer

- Built a generative AI agent for an automotive finance client, integrating LLMs with CRM data to generate insights, answer operational questions and support the sales team.
- Build fully customized AI agents around each business's rules and processes, applying RAG over knowledge bases and prompt engineering for accurate, context-aware answers.
- Manage and integrate AI models on Google Cloud and AWS Bedrock, connecting agents to APIs, enterprise systems and automation workflows.
- Automated a monthly inventory reconciliation between SAP (Brazil) and an ERP (South Korea) for an industrial client with Brity RPA, eliminating manual work through two-step data normalization and validation rules.
- Developed a critical-file monitoring application with Java Spring Boot (back end) and Flutter (front end), featuring database persistence and automatic client alerts.
- Automated tax and finance workflows — invoices, e-mail attachments and payment proposals — integrated with SAP GUI, reducing manual effort.
- Develop and validate REST APIs with Postman, ensuring quality and reliability of integrations.
- Created execution-monitoring and diagnostic dashboards and trained partner teams through technical documentation and workshops.
- Work in an agile squad with Jira and Kanban, Git version control and best practices in architecture, information security and software quality.

Simpar Mar 2024 – Apr 2026

Junior RPA Developer Dec 2025 – Apr 2026

- Developed, optimized and maintained RPA automations and Python/JavaScript scripts for operational routines, focusing on efficiency and error reduction.
- Implemented AI agents to automate and support internal processes.
- Integrated systems and APIs to connect applications and automations in virtualized environments (VMs).
- Built Power BI dashboards to monitor automation availability, performance and results, and tracked KPIs in Azure DevOps.
- Worked with Scrum and Kanban in Sprints (User Stories, Features and Tasks), using Azure Boards and Azure Repos with branching, commits and code review.
- Mapped processes with business teams to identify automation opportunities and documented the delivered solutions.

Service Desk Analyst Sep 2024 – Dec 2025

- Resolved 1,000+ tickets per month and implemented improvements that reduced average resolution time by 20%.
- Developed a web-based employee registration system (HTML, CSS and JavaScript) that increased Service Desk efficiency by 30%.
- Wrote Python and JavaScript scripts for process automation and automated installers for corporate software (Power BI, Docker, VS Code, Office, Node.js, MySQL).
- Automated Jira tickets and managed access and identities in Active Directory and Azure AD, supporting SAP queries.

IT Intern · Service Desk Mar 2024 – Sep 2024

- Provided technical support, diagnostics and system maintenance, configuring devices and managing access in a hybrid Azure environment.
- Helped automate internal processes to streamline support workflows and documented tickets in collaboration with internal teams.

EDUCATION

FIAP Mar 2026 – Jan 2027 (expected)

Postgraduate Specialization in Artificial Intelligence for Developers

Coursework: Machine Learning, NLP, Computer Vision (OCR and object detection), Generative AI, LLMs, Prompt Engineering, RAG, Fine-tuning, cloud AI (AWS, Azure and GCP), data analysis (text, audio and video), data privacy and information security.

Capabilities: Data-driven intelligent applications, building and validating ML models, LLM-based solutions and chatbots, and integrating AI into systems, APIs and automations.

University of Mogi das Cruzes (UMC) Feb 2024 – Dec 2025

Associate Degree in Systems Analysis and Development

Coursework: Programming, databases, software engineering, computer networks, systems administration, object-oriented programming and Git/GitHub.

ACADEMIC & PERSONAL PROJECTS

- **Health risk-factor classification with Machine Learning (FIAP)** — Classification model built with Python, pandas, NumPy, scikit-learn and matplotlib, from exploratory analysis to model evaluation, published on GitHub Pages.
- **Java web systems with databases** — Applications built with Java, JSP and MySQL featuring full CRUD operations, user registration and product management.
- **Personal portfolio** — Responsive website built with HTML, CSS, JavaScript and Motion animations — felipesoeirolopes.github.io.

LANGUAGES

Portuguese — native · English — technical (reading and writing documentation)
